## security components

*A special combination of selenium compound included a highly effective organic selenium source in form of selenium yeast.*

### Highly effective selenium source

In selenium yeast the selenium is integrated into sulphur-containing amino acids. Thus selenium becomes highly usable and is resorbed easily and quickly. The protective functions of selenium (antioxidant, cell protection) take real effect. The selenium source is stored in the tissues and is set free increasingly with high metabolic performance.

- improvement of fertility, less complications after birth
- improved selenium provision of the unborn fetus, less embryonic losses, higher resistance
- higher level of immunoglobulins in the colostrum, support of udder health
- strengthen the antioxidative and immune system

*An individually synchronized combination of vital substances.*

### Macrominerals & trace elements

Highly available macrominerals (Ca, P, Mg, Na) and trace elements (Zn, Mn, Cu, Co I, Se) for low acid binding capacity and fast acidification of food in the stomach.

### Vitamins

An optimized and highly effective vitamin provision strengthens the body defense and lowers the morbidity risk.

*A specially designed security concept for rearing of calves, piglets and lambs.*

**BERGOPHOR®** has developed the **BERGOPHOR MSS** for prevention of diarrheal diseases and for optimizing and stabilization of a healthy intestinal flora.

The **BERGOPHOR MSS** aims on healthy animal and performance-linked rearing and best possible prevention of antibiotic usage.

The **BERGOPHOR MSS** according to our credo "Maximal safety for rearing", aims at

- an optimized nutrient and active ingredient supply
- the support of natural digestion
- the stabilization of healthy intestinal flora
- the strengthening of the body's own defenses
- high daily increases without growth dips
- best possible prevention of antibiotic use

# Drying bath

For the regulation of mites for poultry

**BERGO® CuraMol G**

item no. 6065

**Trading unit:**

**Bag 25 kg, BigBag 1.000 kg**

A highly finely ground dust-reduced powder of pure natural mineral - serves as a drying bath for poultry.

Enables mite regulation without chemicals in a natural way. The highly finely ground natural minerals in **BERGO® CuraMol G** have a purely physical-mechanical effect on the red bird mite. The mobility of the mite is restricted. Thus, the mite no longer reaches the animal. **BERGO® CuraMol G** enables the hens to live out their natural scratching and bathing behavior. The hens gladly accept the dry bath and bathe regularly. **BERGO® CuraMol G** penetrates the plumage during dust bathing and prevents the mite from getting onto the hen's skin. **BERGO® CuraMol G** leads to a drying of the scratching area, enables a meaningful occupation of the laying hens and thus also makes a valuable contribution to the optimization of animal welfare. Due to mite regulation with **BERGO® CuraMol G**, only few mites are found in the barns and the hens are practically no longer bothered.

Is obtained from crushed natural stone and consists of:

- silicate minerals
- magnesium minerals
- calcium minerals

The application is non-toxic and does not lead to resistance. The permanent use of **BERGO® CuraMol G** leads to successful mite regulation.

**BERGO® CuraMol G** can be offered to the hens in suitable containers (tubs, boxes) or also loose in the coulter room. For a group of 5,000 birds, it is recommended to give 50 kg twice a week or 100 kg once a week in 2 sand boxes in the coulter room or winter garden. **BERGO® CuraMol G** can also be piled up on the floor. The animals then distribute the product.

**Recommendations for use:**

0,5 - 1 kg per animal and year

**BERGO® CuraMol G** is listed on the list of organic farming products in Germany.

# Silage additives

## BERGO® Lactosil Duo

item no. 0850

Trading unit:

1 Package = 5 x 50 g Bag

Instant preparation for liquid application for field and meadow grass, alfalfa, GPS. Combination product of homo- and heterofermentative lactic acid bacteria, for faster lactic acid fermentation and reduction of fermentation and mold growth in grass silages.

**Improved reliability:** The efficiency and environmental stability of lactic acid bacteria is improved by the formation of ECPS.

- helps the MSB to grow faster  
→ faster lactic acid formation and pH reduction
- supports the MSB in efficient fermentation
- makes MSB more robust, which leads to better fermentation, silage quality and higher feed intake

According to EU Organic Regulation (EC) 2018/848 and Annex III of Implementing Regulation (EC) 2021/1165, the use of „microorganisms“ of the functional group 1k as silage additive in organic production is permitted.

## BERGO® Lactosil Fresh

item no. 0734

Trading unit:

1 Package = 5 x 100 g Bag

Instant preparation for liquid application for corn silage and CCM. The acetic acid formed by *Lactobacillus buchneri* maintains the low pH of the silage under the influence of air and reduces the risk of re-heating, and the growth of yeasts and molds is sustainably suppressed. Improves the aerobic stability of the silages.

DLG quality mark: category 2

According to EU Organic Regulation (EC) 2018/848 and Annex III of Implementing Regulation (EC) 2021/1165, the use of „microorganisms“ of the functional group 1k as silage additive in organic production is permitted.
